Computational Functional Genomics and Genome Medicine - Session 3

What you need:

1. Access to an LLM provider

If you already have access to a ChatGPT Pro subscription or Claude Code, you can use that. For reasons of simplicity, we will use Github Copilot, which is accessable for free for enrolled students via the Github Education program.

1.1 A GitHub account

- a Uni-Bonn e-mail needs to be registered and verified (From your official Github page: `User navigation menu` -> `Settings` -> `Emails`)
- 2FA needs to be activated (`User navigation menu` -> `Settings` -> `Password and authentication`)

1.2 Access to the Github Education program

Instructions for applying:

- Go to `User navigation menu` -> `Settings` -> `Billing and licensing` -> `Payment information`.
- Enter your name and adress in the billing information. You don't need to provide bank details. Your name will be compared with a document of your student status.
- Next, go to `User navigation menu` -> `Settings` -> `Billing and licensing` -> `Education benefits` -> `Start an application`
- Enter your information:
  - Select your role in education: `Student`
  - What is the name of your school? `Rhenish Friedrich Wilhelm University, Bonn`
  - What is your school email address? `<your.e-mail@uni-bonn.de>`
  - You need to share your location
  - You will be asked for a document as proof of your status as student. A screenshot from the Studierendenausweis in the mobile app did the job for me. It needs to show your name.
- The application should ideally take less than 5 minutes.

2. Install R (https://cran.r-project.org/)

If you have a version of R already installed, you are good to go.

3. Install Positron (https://positron.posit.co/)

Download and install from https://positron.posit.co/download.html. It is a data science IDE designed for R and Python, comparable to RStudio, but with much better integration of coding agents.

4. Familiarize yourself with the Positron IDE (Optional)

Find out how to open a project folder, install and update packages, and execute some R code.

If you don't get access to Github Copilot or another model, that's no problem. You can still follow the course, it will just be less interactive.
